### 3. CONSTRUCTION TECHNEQUES OF DEENBANDHU BIOGAS PLANTS (SPECIFICATION)

To build a faultless Deenbandhu biogas plant it is essential that all the construction work is done in a systematic manner and by taking all the suggested precautions. The following is the sequence and details of the constructional methodology evolved for these plants.

The following points for selecting the site for installation a Deenbandhu Plant.

- (i) The surface should be even
- (ii) The site should be at a slightly higher elevation than the surroundings so that there are no chances of water logging in rainy seasons.
- (iii) The site where the plant is to be installed should be as near to the point of gas utilization as possible.
- (iv) The site should be closed to the cattle shed to eliminate any difficulty in during collection.
- (v) Water availability near the plant is essential.
- (vi) The edge of the plant should be at least 2m(6 ft) away from the foundation of the house or any other buildings.
- (vii) The avoid carrying of spent slurry to very long distances, the space for the compost P: 1 – should be available near the plant.
- (viii) The location of plant should be at least 10 – 15 m (30-40 ft) away from any source of drinking water.
- (ix) The bearing stress of the earth should not be very less to eliminate the possibility of sinking of the plant.
